

Main findings

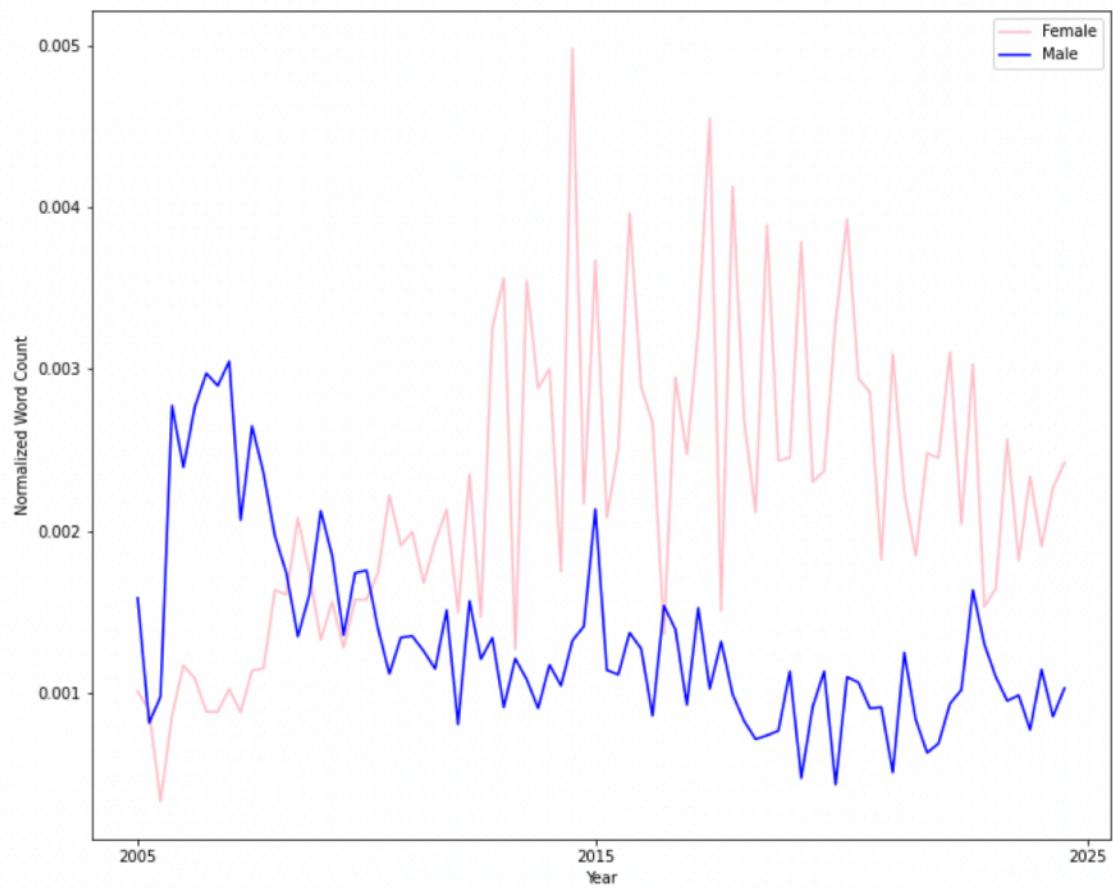

- Usage of words describing gender identity has been decreasing steadily for both males and females. However, these words are almost twice as frequently used in women introductions.
- Usage of words about recognition has been decreasing among male scientists, while these words have been increasingly more used among female scientists
- Usage of prestige words overall has been increasingly more used among female scientists

Future work

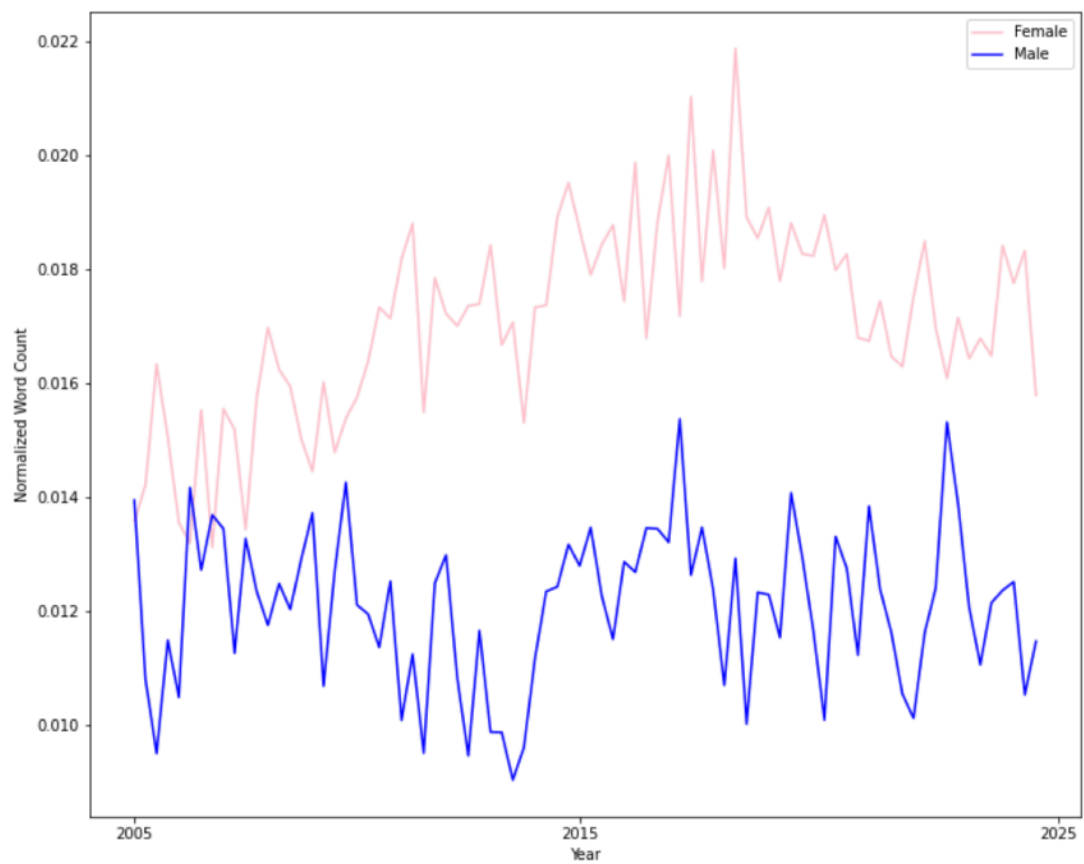

- Analyse the introductions in more depth and beyond word frequency, do natural language processing like sentiment analysis using AI
- Do TD-IDF and Bag-Of-Words to analyse the most frequently used words
- Validate results by sampling a new set of scientist

Occurance of words describing gender identity

Occurance of words describing recognition

Occurance of words describing prestige
